# Concrete laboratory of MC-Bauchemie

To provide technical support to customers and to ensure the company's continuous scientific development, a modern, accredited concrete laboratory has been established in Berezan

- Development and optimization of concrete mix designs
- Investigation and testing of raw material properties
- Testing of fresh concrete properties (consistency and air content)
- Testing of hardened concrete properties, including compressive strength, water tightness, freeze–thaw and de-icing salt resistance, as well as heat development
- Technical consulting by technologists in the design of special concretes, e.g. for massive structures, high-strength and corrosion-resistant concretes, as well as shotcrete

Concrete Laboratory of MC-Bauchemie in Berezan

**Founded in 2020** to train specialists in Ukraine in the most advanced European construction technologies

**Objectives:** Building a new generation of qualified and talented young professionals through participation in training programs conducted in the company's laboratories

In cooperation with the MC Academy, **KNUBA** has adapted the first European certification training program in Ukraine, *“Concrete Repair”*, to the specific conditions of the Ukrainian construction market
